

SESSION 1

INTRODUCTION TO SaaS and CRM

Practical Demonstration:

Sign in to Salesforce, agree to the terms, and explore the available features and tools.

Sign in to Zoho CRM, agree to the terms, and explore the available features and tools.

Sign in to HubSpot, agree to the terms, and explore the available features and tools.

Observation:

Session 1

INTRODUCTION TO SaaS & CRM

What is SaaS ?

=> SaaS stands for Software as a Service. It is a cloud computing model where software applications are provided to users over the internet.

Users access the software through a web browser eliminating the need for installation and maintenance on their local machines.

=> Benefits of SaaS :-

* Cost-effective :- SaaS models eliminate purchase & installation costs & are virtually maintenance free.

* Time Management :- SaaS eliminates the work hours for downloading or upgrading traditional software. Maintenance is the work of the vendor.

* Scalability & Accessibility :- The user can upgrade the SaaS models as per their needs & its solutions are accessible from anywhere.

* Guaranteed Service :- Data backups are often labour intensive. SaaS solutions enable automated backup without human intervention.

Examples:- Salesforce, HubSpot,

=> What is CRM

CRM stands for Customer relationship management, which is a system for managing all of your company's interactions with current & potential customers.

The goal is simple: improve relationships to grow your business. CRM technology helps companies stay connected to customers, streamline processes & improve profitability.

=> Why CRM is Important

CRM is vital for business because it centralizes customer data, enhances team collaboration & automates tasks to boost sales & retention.

=> Features of CRM :-

1. **Contacts :-** Contacts are records in a CRM that store detailed information about customers or leads, such as name, ph no, email, company details & communication history.
2. **Deals :-** Deals represent potential sales opportunities being tracked in the CRM, including details like deal value, associated contact, & sales stage.
3. **Pipelines :-** Pipelines are visual representations of the different stages in a sales process, showing the progress of deals from initial contact to final closure.

4. Automation: Automation in CRM refers to the use of rules & workflows to automatically perform tasks such as sending emails, assigning leads, updating deal stages & setting reminders.
